AI-Augmented Testing 5

This section includes test cases generated with AI assistance to identify advanced edge cases, risk scenarios, and failure conditions across core banking workflows. All AI-suggested test cases were reviewed, refined, and executed manually to ensure accuracy, relevance, and alignment with real-world application behavior.

C70: Fund transfer submission during network interruption

Type	Priority	Estimate	References
Functional	Medium **Is**	None	None
Automation Type	**Automated**		
None	No		
Test Case Labels			

Preconditions

- User is logged in
- Source account has sufficient balance
- Network can be disabled manually

Steps

- Navigate to the Transfer Funds page
- Enter valid transfer details
- Disable internet connection before clicking submit
- Click the Submit button

Expected Result

The transfer is not processed and an appropriate error message is displayed without deducting any balance.

C71: Duplicate bill payment prevention on browser refresh after submission

Type	Priority	Estimate	References
Functional	Medium **Is**	None	None
Automation Type	**Automated**		
None	No		
Test Case Labels			

Preconditions

- User is logged in
  Account has sufficient balance

Steps

- Navigate to the Bill Pay page
- Enter valid payee and payment details
- Click Submit
- Immediately refresh the browser

Expected Result

Only one bill payment is recorded and no duplicate transaction is created.

C72: Large numeric value handling in transfer amount field

Type	Priority	Estimate	References
Functional	Medium **Is**	None	None
Automation Type	**Automated**		
None	No		
Test Case Labels			

Preconditions

User is logged in

Steps

- Navigate to the Transfer Funds page
- Enter an extremely large numeric value in the amount field
- Attempt to submit the transfer

Expected Result

The system handles the large value safely and prevents processing if it exceeds system-defined limits.

C73: Concurrent transfers from two tabs using the same source account

Type	Priority	Estimate	References
Functional	Medium **Is**	None	None
Automation Type	**Automated**		
None	No		
Test Case Labels			

Preconditions

- User is logged in
- Application is open in two browser tabs
  Source account has limited balance

Steps

1. In Tab 1, enter valid transfer details
2. In Tab 2, enter another transfer using the same source account
3. Submit both transfers simultaneously

Expected Result

System processes transfers correctly based on available balance and prevents over-deduction.

C74: Unauthorized page access after manual session cookie deletion

Type	Priority	Estimate	References
Functional	Medium **Is**	None	None
Automation Type	**Automated**		
None	No		
Test Case Labels			

Preconditions

User is logged in

Steps

1. Open browser developer tools
2. Delete session cookies manually
3. Attempt to navigate to an internal page

Expected Result

User is redirected to the login page and access to authenticated pages is denied.
